<u>Some pointers for presentations</u>:

1) Introduction:
(a) say what your message(s) will be today,
(b) show the message(s) in your presentation,
(c) summarize the message(s) at the end

2) Forecast:
- State what your source of forecast information is. Good idea, if possible to use multiple sources (e.g., 2)
- State why those locations chosen – motivated by wave structure? (Not necessary)

3) Show some cumulative data from the start of the collection period.
- what are you seeing for trends
- might be good to show wave amplitude vs. 500 hPa wind speed on a time-series plot.
- Reflection on what you are seeing is a great idea. It's the first step toward analysis.
